# PE GP Quarterly LP Reporting - Controlled Workflow

Correct GP-to-LP reporting process with internal review gates, source lineage, and controlled distribution

### 1. Source Intake

Portfolio company PDFs, KPI workbooks, board materials, fund administrator files, valuation support, prior LP report, legal checklist, and review emails.

### 2. Ingestion & Classification

Classify PDF, XLSX, email, and prior-report inputs; identify entity, reporting period, source owner, duplicate submissions, and version.

### 3. Metric Normalization

Map synonyms into a common metric dictionary; normalize revenue, EBITDA, leverage, liquidity, NAV, TVPI, DPI, RVPI, and IRR.

### 4. Exception Queue

Flag missing EBITDA, missing gross margin, low confidence extraction, stale period, inconsistent source, or unsupported narrative claim.

### 5. Deal Team Review

Investment analysts, deal leads, and portfolio operations validate company metrics, operating drivers, risks, and Q2 priorities.

### 6. Fund Accounting / CFO Review

Fund controller and CFO reconcile NAV, fees, expenses, capital accounts, contributions, distributions, TVPI, DPI, RVPI, and IRR.

### 7. Valuation Committee Review

Committee approves fair value marks, valuation methodology, market multiples, company-specific changes, and valuation disclosures.

### 8. Investor Relations Review

IR shapes LP narrative, report structure, formatting, approved language, distribution list, and investor follow-up process.

### 9. Legal & Compliance Review

Legal/compliance approves confidentiality language, MNPI controls, marketing rule constraints, forward-looking statements, and retention.

### 10. Managing Partner Approval & Distribution

Managing Partner signs off; platform watermarks the report, applies LP permissions, distributes, and archives the evidence trail.

### Control Lane A - Source Lineage

Every value has source file, page/sheet/cell, confidence score, formula, reviewer, approval status, and final report location.
